

ASSIGNMENT 2

PART 1: APPLYING

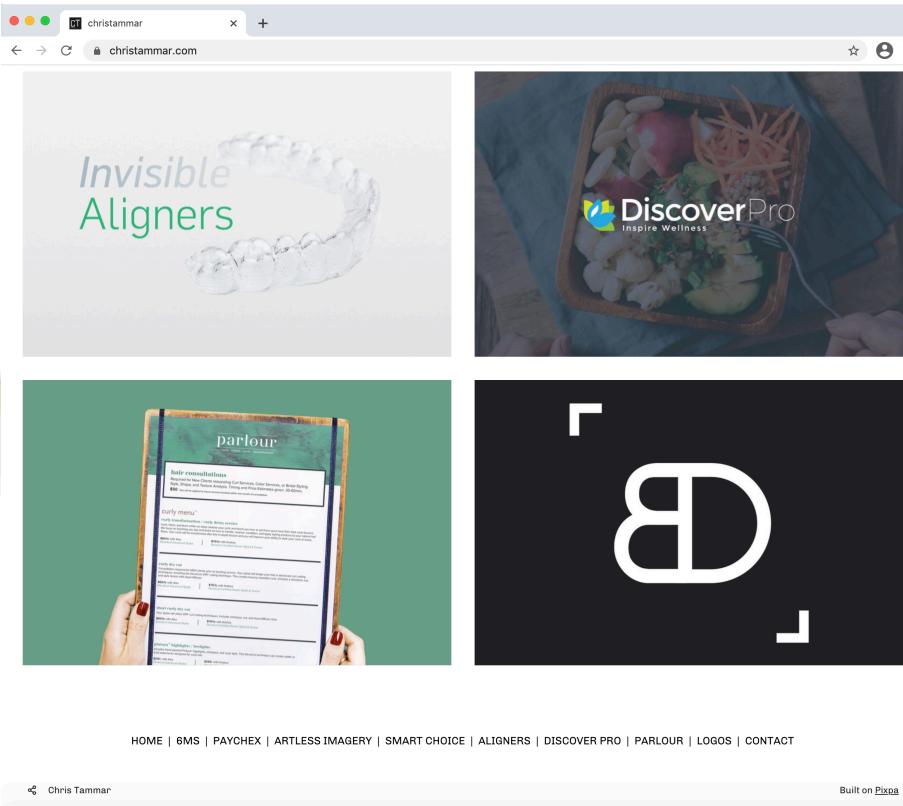

USABILITY HEURISTICS

#2: MATCH BETWEEN SYSTEM AND THE REAL WORLD

- This portfolio website uses this heuristic by using language that anyone, even non-designers can understand. They do not use jargon that only designers would understand and it's written very clearly and straightforward.
- <http://www.helenbouman.com/>

#4: CONSISTENCY AND STANDARDS

- This portfolio website violates this rule because the images of the works are links that lead to the pages about the works. But there are links all the way at the bottom also lead to the same works. This is redundant and causes confusion for a minute until the viewer realizes the links are the same as the images. I think to solve this problem the designer should put the text links underneath the corresponding images so that it doesn't cause confusion.

#8: AESTHETIC AND MINIMALIST DESIGN

- This website has a very minimalist design and has no unnecessary extra decorations or anything that's distracting. It's very simple looking and easy to follow along with. There are only 2 navigation links (works and about).
